

ANTIMICROBIAL COATING AVRON 46®

Having clean indoor air that is free of microbials is important to any facility, but especially critical when it comes to hospitals, nursing homes, medical clinics, laboratories and classrooms. One easy way to help ensure that air is microbial free in critical care facilities is to add FläktGroup® SEMCO®'s AVRON 46 Antimicrobial Coating® to ductwork, acoustical panels, sound attenuators and HVAC systems.

The coating's special formula contains an industry-leading, anti-fungal agent that has been proven to control and inhibit microbial growth. It has also been proven to kill 95% of microbial activity within 4 hours.

For duct and sound attenuators, the coating is applied to the interior. The exterior aesthetics will not be compromised. AVRON 46® comes in an air dry formula for field applications and in sheet form for use in HVAC applications.

To learn more about AVRON 46® anti-microbial coating and to contact your nearest representative please visit www.semcohvac.com

- Kills 95% of bacteria & fungi microbial activity within 4 hours.
- Effective for 20 years after application.
- Perfect for hospitals, nursing homes, laboratories, and schools.
